T

Are you sure you want delayed protection?

Our firewall rules block exploits targeting WordPress plugins, themes and core. Our malware signatures detect whether your site has been compromised. We release firewall rules and malware signatures in real-time to our Premium customers.

For less than \$12.50 per month (paid annually) you can get real-time firewall rules and malware signatures as we release them. Are you sure you want the free version of Wordfence which receives firewall rules and malware detection 30 days later than our Premium customers?

I'd like real-time protection!

BasicAdvancedTools

Max Login Retries

3

Number of failed login attempts within the "Retry Time Period Restriction" (defined below) needed to trigger a Lockdown.

Retry Time Period Restriction

5 minutes

The time in which failed login attempts are allowed before a lockdown occurs.

Lockout Length

60 minutes

The time a particular IP will be locked out once a lockdown has been triggered.

Log Failed Attempts With Non-existent Usernames

☒

Log failed log in attempts with non-existent usernames the same way failed attempts with bad passwords are logged.

Mask Login Errors

☐

Hide log in error details (such as invalid username, invalid password, invalid captcha value) to minimize data available to attackers.

Block Type

☐ Completely block website access

☒ Only block access to the login page

Completely block website access for blocked IPs, or just blocking access to the login page.

Block Message

We're sorry, but your IP has been blocked due to too many recent failed login attempts

Message displayed to visitors blocked due to too many failed login attempts. Default: *We're sorry, but your IP has been blocked due to too many recent failed login attempts.*

Whitelisted IPs

List of IP addresses that will never be blocked. Enter one IP per line.
